

RtI Data Tracking Tools Survey Results

In October and November 2013, the Wisconsin RtI Center asked school administrators to identify academic and behavioral RtI data tracking tools used in their schools. About 200 Wisconsin schools completed the RtI Data Tracking Tools survey. Below are the most commonly identified tools used for data collection in the area of academics and behavior.

Survey results did not include which school grade-levels were associated with which tools. Also, no specific school was associated with a specific tool as a result of its survey response. N indicates the number of respondents choosing that particular tool.

Some notable observations:

- Many schools reported using more than one tool; this was more common for schools reporting the use of academic tools than for behavior tools.
- The most commonly reported tools are indicated in **bold** below
- Over half of respondents for academic tools indicated the use of locally created forms

Note that the Wisconsin RtI Center is reporting these data for the benefit of Wisconsin schools and does not endorse any specific data collection tools.
